

Non-Transient Consumer Notice of Tap Water Lead Result

Dear Consumer:

Carlisle High School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water:	<.5
Action Level for Lead:	15 micrograms per liter (µg/L)
Location of sample:	<i>Boys RR Commons Sink 4</i>
Sample collection date:	<i>06/08/2018</i>

This Tap Water Lead Result Was Less Than 15 µg/L.

What Is Being Done?

Our 90th percentile value for lead is 1.04. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 µg/L. This means PWSs must ensure that water from taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a PWS must follow. Because lead may pose serious health risks, the EPA set a Maximum Contaminant Level Goal (MCLG) of zero for lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Non-Transient Consumer Notice of Tap Water Lead Result

Dear Consumer:

Carlisle High School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water: <.6
Action Level for Lead: 15 micrograms per liter (µg/L)
Location of sample: Boys RR Commons Sink 3
Sample collection date: 06/08/2018

This Tap Water Lead Result Was Less Than 15 µg/L.

What Is Being Done

Our 90th percentile value for lead is 1.04. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 µg/L. This means PWSs must ensure that water from taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a PWS must follow. Because lead may pose serious health risks, the EPA set a Maximum Contaminant Level Goal (MCLG) of zero for lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Non-Transient Consumer Notice of Tap Water Lead Result

Dear Consumer:

Carlisle High School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water:	<1.16
Action Level for Lead:	15 micrograms per liter (µg/L)
Location of sample:	<i>Boys RR Commons Sink 2</i>
Sample collection date:	<i>06/08/2018</i>

This Tap Water Lead Result Was Less Than 15 µg/L.

What Is Being Done?

Our 90th percentile value for lead is 1.04 _____. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 µg/L. This means PWSs must ensure that water from taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a PWS must follow. Because lead may pose serious health risks, the EPA set a Maximum Contaminant Level Goal (MCLG) of zero for lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Non-Transient Consumer Notice of Tap Water Lead Result

Dear Consumer:

Carlisle High School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water:	<.5
Action Level for Lead:	15 micrograms per liter (µg/L)
Location of sample:	<i>Boys RR Commons Sink 1</i>
Sample collection date:	<i>06/08/2018</i>

This Tap Water Lead Result Was *Less Than* 15 µg/L.

What Is Being Done?

Our 90th percentile value for lead is 1.04. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 µg/L. This means PWSs must ensure that water from taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a PWS must follow. Because lead may pose serious health risks, the EPA set a Maximum Contaminant Level Goal (MCLG) of zero for lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Non-Transient Consumer Notice of Tap Water Lead Result

Dear Consumer:

Carlisle High School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water:	<.5
Action Level for Lead:	15 micrograms per liter ($\mu\text{g/L}$)
Location of sample:	<i>Girls RR Commons Sink 4</i>
Sample collection date:	<i>06/08/2018</i>

This Tap Water Lead Result Was Less Than 15 $\mu\text{g/L}$.

What Is Being Done?

Our 90th percentile value for lead is 1.04. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 $\mu\text{g/L}$. This means PWSs must ensure that water from taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a PWS must follow. Because lead may pose serious health risks, the EPA set a Maximum Contaminant Level Goal (MCLG) of zero for lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Non-Transient Consumer Notice of Tap Water Lead Result

Dear Consumer:

Carlisle Elementary / Middle School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water:	3.51
Action Level for Lead:	15 micrograms per liter (µg/L)
Location of sample:	<i>Fountain Teacher Lounge Sink</i>
Sample collection date:	<i>06/08/2018</i>

This Tap Water Lead Result Was Less Than 15 µg/L.

What Is Being Done?

Our 90th percentile value for lead is 3.51. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 µg/L. This means PWSs must ensure that water from taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a PWS must follow. Because lead may pose serious health risks, the EPA set a Maximum Contaminant Level Goal (MCLG) of zero for lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

What are the Health Effects of Lead?

Lead can cause serious health problems if too much enters your body from drinking water or other sources. It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body. The greatest risk of lead exposure is to infants, young children, and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones, and it can be released later in life. During pregnancy, the child receives lead from the mother's bones, which may affect brain development.

Where Can I Get Health Screenings and Testing of Blood Lead Levels?

Non-Transient Consumer Notice of Tap Water Lead Result

Grigsby Intermediate School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water:	<.5
Action Level for Lead:	15 micrograms per liter (µg/L)
Location of sample:	<i>Boys Restroom Sink</i>
Sample collection date:	<i>06/08/2018</i>

This Tap Water Lead Result Was Less Than 15 µg/L.

What Is Being Done?

"Our 90th percentile value for lead is .92. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 µg/L. This means PWSs must ensure that water from taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a PWS must follow. Because lead may pose serious health risks, the EPA set a Maximum Contaminant Level Goal (MCLG) of zero for lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Non-Transient Consumer Notice of Tap Water Lead Result

Dear Consumer:

Grigsby Intermediate School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water:	<.64
Action Level for Lead:	15 micrograms per liter (µg/L)
Location of sample:	<i>Boys Restroom Sink 2</i>
Sample collection date:	<i>06/08/2018</i>

This Tap Water Lead Result Was Less Than 15 µg/L.

What Is Being Done?

"Our 90th percentile value for lead is .92. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 µg/L. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Non-Transient Consumer Notice of Tap Water Lead Result

Dear Consumer:

Grigsby Intermediate School is a public water system (PWS) responsible for providing drinking water that meets state and federal standards. A drinking water sample for lead was collected at this location and the result is:

Amount of Lead in Water:	1.35
Action Level for Lead:	15 micrograms per liter (µg/L)
Location of sample:	<i>Girls Restroom Sink 1</i>
Sample collection date:	<i>06/08/2018</i>

This Tap Water Lead Result Was *Less Than* 15 µg/L.

What Is Being Done?

"Our 90th percentile value for lead is .92. This value does not exceed the action level, therefore, there are no actions being implemented at this time other than sharing this consumer notice.

What Does This Mean?

Under the authority of the Safe Drinking Water Act, the U.S. Environmental Protection Agency (EPA) set the action level for lead in drinking water at 15 µg/L. This means PWSs must ensure that water from taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a PWS must follow.
